

READIVIEW™

HANDHELD MICROSCOPE

Have you ever wondered what a leaf or blade of grass looks like under a microscope? With Meade's Readiview the Microscopic world is within your grasp.

Meade's Readiview is ultra-portable, a radical new design, that allows you to view microscopic objects at home or in the field. Carry it in the palm of your hand. You can use it in a moments notice. Just gently move Readiview's lighting arm into position, place a specimen slide on the base, and secure it in place with the magnetic holder. You are now ready to start exploring the microscopic universe.

- Compact and portable—perfect for use in the field
- Observations can be made directly without damaging the specimen
- View biological slides and solid objects as well
- 25 prepared specimen slides are included with your Readiview to support the process of exploration
- Lighting arm conveniently folds down and out of the way for storage
